

EmailTrust POC Analytics

Understanding the Basic Data Story (for Sellers)

Phoenix Clarke

Manager of Data Analytics, Customer Success

Tenure: 2 Months

About Me

I am a plainspoken idealist who is passionate about innovation, data integrity, and continued growth.

I live a life rooted in principles and my top values, which I like to refer to as the 4 I's: Integrity, Initiative, Informativeness, and Innovation.

Having started my career in the world of graphic design, I love having an opportunity to blend creativity with data science. I am energized by deep analysis, data storytelling, and solving puzzles that provide long-lasting value.

10 Years Fraud Analytics
6 Years Device Forensics for Litigation eDiscovery
4 Years GIS Application Development

Focus for Today:

Training for Sellers to deliver the Basic POC Data Story

- Understand results from an EmailTrust offline POC
 - *The What – not the Why or How*
 - *The End Results – not the beginning Pitch*
- Understand the visualizations and interactive controls that guide your conversation
- Understand the calculations on screen for more informed conversations

Housekeeping

-  Have an idea for a future iteration?
-  Have a question about how the product works?
-  Have a suggestion for improvement?
-  Want more detail than discussed here?
-  Not a Seller but have a concern or question?

Put it in the Chat!

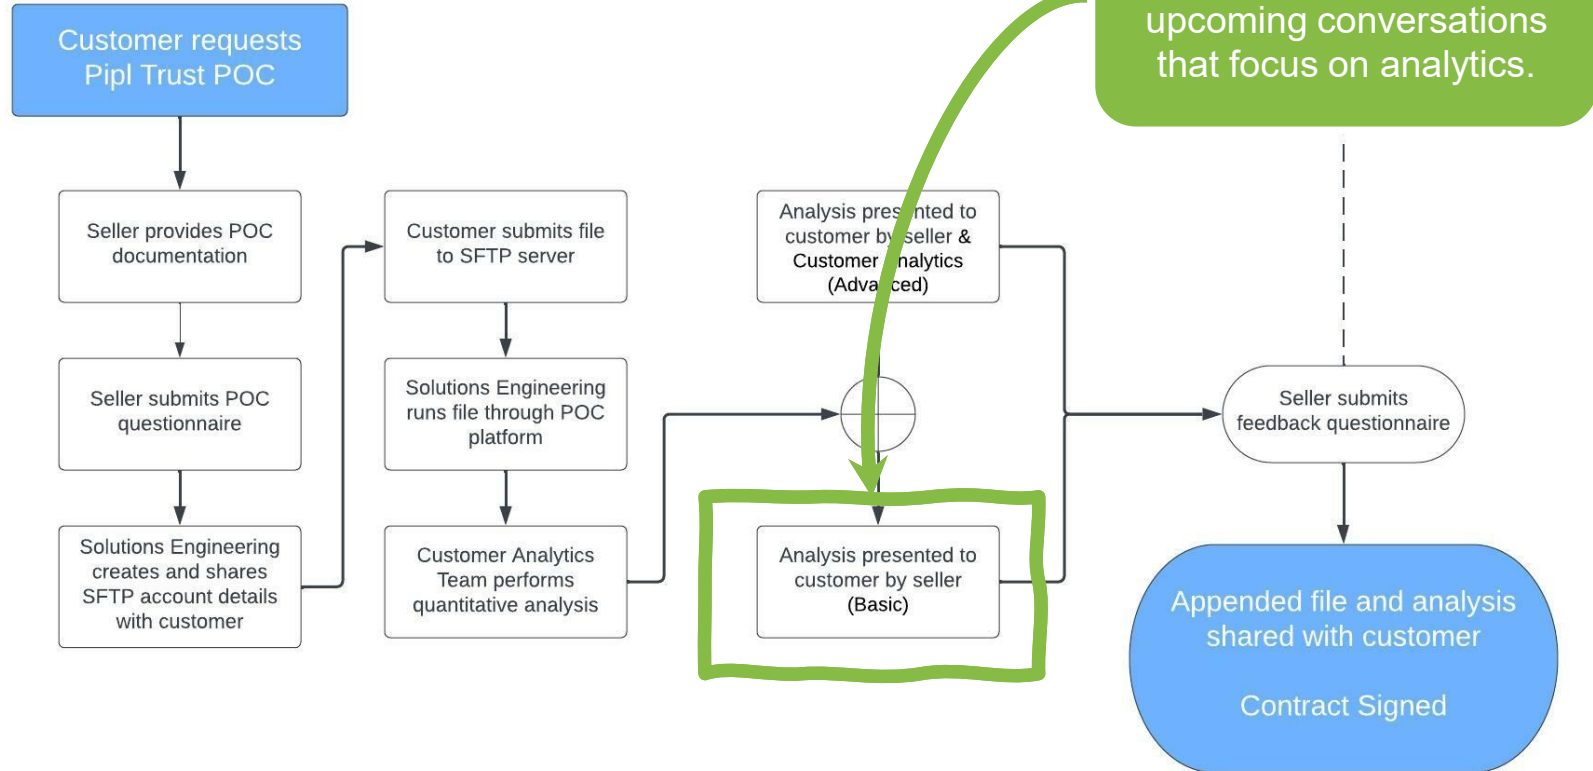

Michael Anderson is monitoring and preparing for next steps.

Agenda

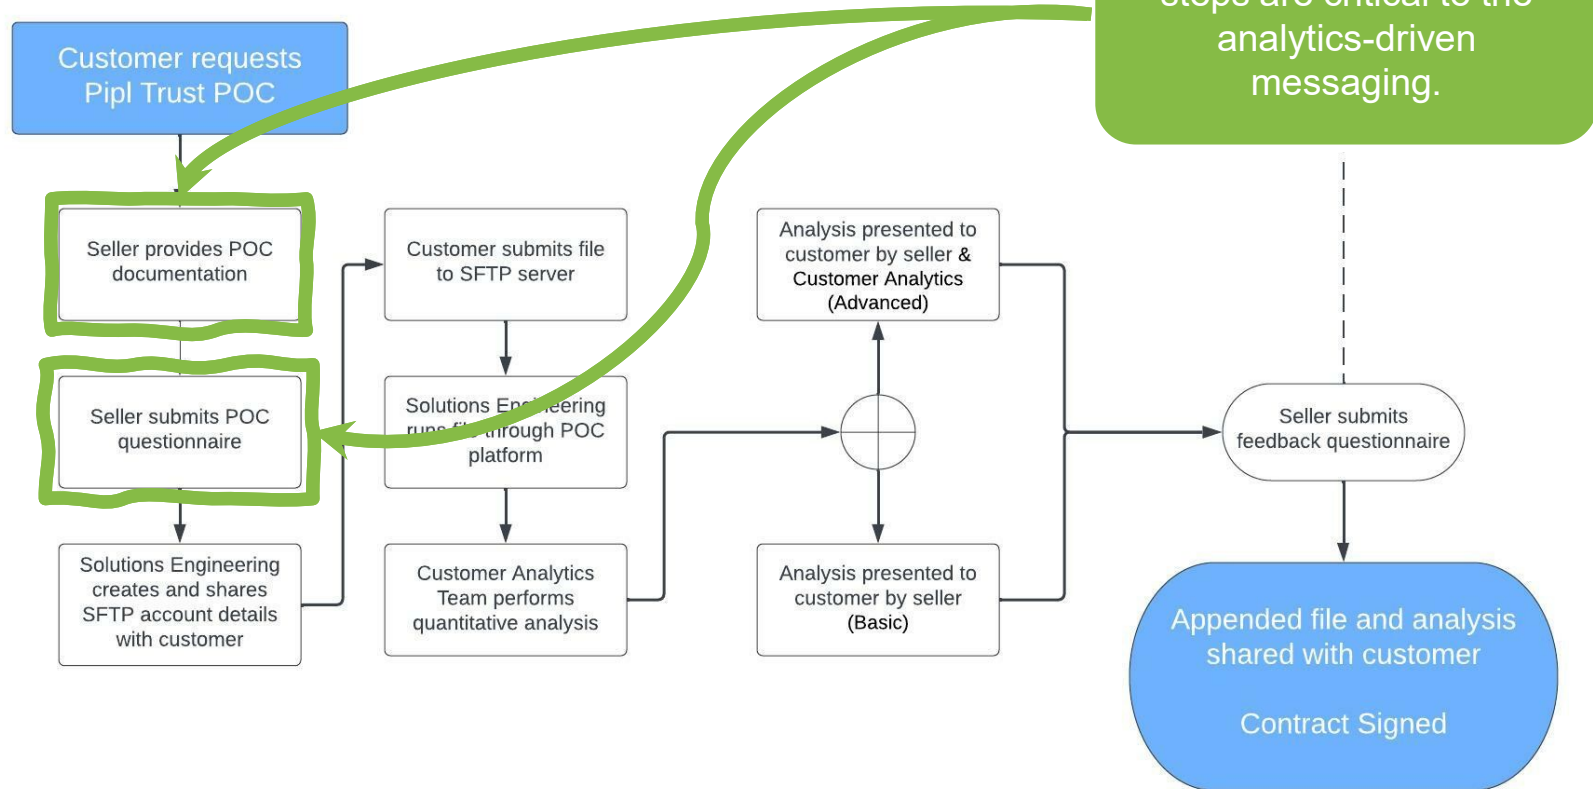

.....
EmailTrust Proof of Concepts

- Recap Flow for Overall POC Process
- Basic vs Advanced Analytics
- Required Fields & Data Types
- Goals of POC Conversation
- Value Proposition
- **Tableau Walkthrough (Basic)**
- Presentation Tips
- Resources
- Q&A

Overall Pipl Trust POC Process

Overall Pipl Trust POC Process

Importance of those First Steps

Seller Shares with Client the POC Documentation

- ✓ Helps client understand format and structure for file and data to submit
 - File type restrictions: CSV
 - Column naming convention
- ✓ Documents data fields to submit
- ✓ Emphasizes importance of optional fields
- ✓ Specifies allowed values for optional fields
- ✓ Ensures we don't get *unknown* values for analytics: GIGO
- ✓ Ensures ROI calculations always work as expected

Seller Submits POC Questionnaire

- ✓ Connects our value prop to their specific issue
- ✓ Provides understanding of manual review workflow
- ✓ Allows us to quantify value because we know where our solution fits
- ✓ Allows us to estimate actual uplift based on actual costs and workflow
- ✓ Allows us to estimate more accurate ROI based on their actual costs

Basic vs Advanced

What's the Difference?

*We cannot prove
there will be uplift
if we do not have
a baseline:
their original decisions.*

Client Inputs Drive Analytics Workflow

What exactly is required for success?

Basic

List of Items to Process

Answers to Preliminary Questionnaire

Advanced

List of Items to Process

Previous Decisions / Outcomes*

Flags for Reviewed Items*

Transaction Costs*

Answers to Preliminary Questionnaire

* Has format requirements

Client Inputs Drive Analytics Workflow

Let's examine those required fields.

Basic

Email Address

Advanced

Email Address

Decision*

Manual Review*

Amount*

Reference ID

* Has format requirements

Understanding Key Fields for Advanced

Yes, Tell Me More than Just an Email Address

decision

The original decision that was made when processing this consumer's transaction

Fixed list of Values:

- approved
- declined
- canceled

manual_review

Was that decision reached using a non-automated procedure such as human review?

Boolean:

- TRUE
- FALSE

amount

Are there known transaction costs or financial losses associated with this verified consumer?

Float / Decimal:

- 9.06
- 8965.24
- 5.00

reference_id

Alphanumeric primary key from the client's system to link results to a transaction or customer.

Data Type:

- Any
- Not Used*

Basic vs Advanced Analytics

It's not about who you know or how much they are paying, it's about what we know.

Pipl Trust Value Propositions

How does our data solve their problem?

We're not here to pitch an ROI. We're here to validate the product purpose.

Estimated ROI & Uplift Summary

Estimated Return on Investment Based on Automated Decisions

This calculator uses your chosen score ranges to estimate the quantitative and monetary impact of today's analysis.

Impact of Automated Decisions

Auto-Declines

Total Uplift

\$18K

	1	2	3	5	Quantity	
 Reduction in Technology Costs Transactions selected for <u>auto-approve</u> or <u>auto-decline</u> that no longer need to call additional downstream services for identity verification or fraud prevention. <i>Calculation: Transactions with scores above 700 and scores below 199.</i>					49,789	\$2,489
 Reduction in Manual Reviews Transactions selected for <u>auto-decline</u> that you confirmed were manually reviewed. Low Trust Scores will prevent the need for research. <i>Calculation: Manual Review = True with scores below 199</i>					7	\$0
 Improved Customer Experience Transactions selected for <u>auto-approval</u> that you confirmed were manually reviewed. High Trust Scores will expedite the review process and reduce customer friction. <i>Calculation: Manual Review = True with scores above 700.</i>					182	\$9
 Reduction in False Declines Transactions selected for <u>auto-approval</u> but were declined originally due to suspected fraud but were falsely declined. <i>Calculation: Transactions with scores above 700 and Decision = declines multiplied by the percentage of false declines (1.4%).</i>					6	\$12,658
 Fraud Losses Avoided Up-Front Transactions selected for <u>auto-decline</u> whose low Trust Scores allowed you to confidently avoid known financial losses and potential fraud exposure. <i>Calculation: Transactions with scores below 199 that were already approved.</i>					3	\$2,906

Our ROI will link the existing value proposition into reduced internal costs, recovered revenue, and avoided losses.

How does our data solve their problem?

The Value Proposition Discussion Should Address their Top Concerns

Losing Money

- to False Declines
- to Missed Fraud Catch
- to Operational Costs of Reviews
- to Tech Costs of Layered Fraud Detection

Losing Customers

- to False Declines
- to Friction at *The Close*
- to Frequent / Inconsistent KBA & OOW Questions

Losing Time

- to Manual Reviews
- to Validating Multiple Fraud Prevention Resources (Websites & APIs)

How does our data solve their problem?

How our Value Proposition Addresses Losing Money

- to False Declines
- to Missed Fraud Catch
- to Operational Costs of Reviews
- to Tech Costs of Layered Fraud Detection

- ✓ Eliminate False Declines for scores above a selected high-trust threshold
- ✓ Avoid fraud losses by declining up front scores below a selected no-trust scores
- ✓ Eliminate manual reviews for complete-trust scores
- ✓ Reduce calls to fraud prevention providers with Pipl Trust at top of funnel / workflow
- ✓ Provide scores and trust signals to better tune ML models and customize rule-based decisions in customer journey

How does our data solve their problem?

How our Value Proposition Addresses Losing Customers

Losing
Customers

- to False Declines
 - to Friction at *The Close*
 - to Frequent / Inconsistent KBA & OOW Questions
- ✓ Eliminate False Declines for customers with scores above a selected high-trust threshold
 - ✓ Expedite or avoid manual review for customers with complete-trust scores
 - ✓ Create platinum experience for trustworthy customers
 - ✓ Skip Costly KBA and OOW calls for customers with complete-trust scores

How does our data solve their problem?

How our Value Proposition Addresses Losing Time

- to Manual Reviews
- to Validating Multiple Fraud Prevention Resources (Websites & APIs)

- ✓ Accelerate manual review decisions and resolve transactions automatically based on score
- ✓ Expedite manual reviews for no-trust scores
- ✓ Reduce research at duplicate fraud prevention sites with Pipl Trust Insights (Web UI)

Presentation Tips

Making the Most of Your Workbook

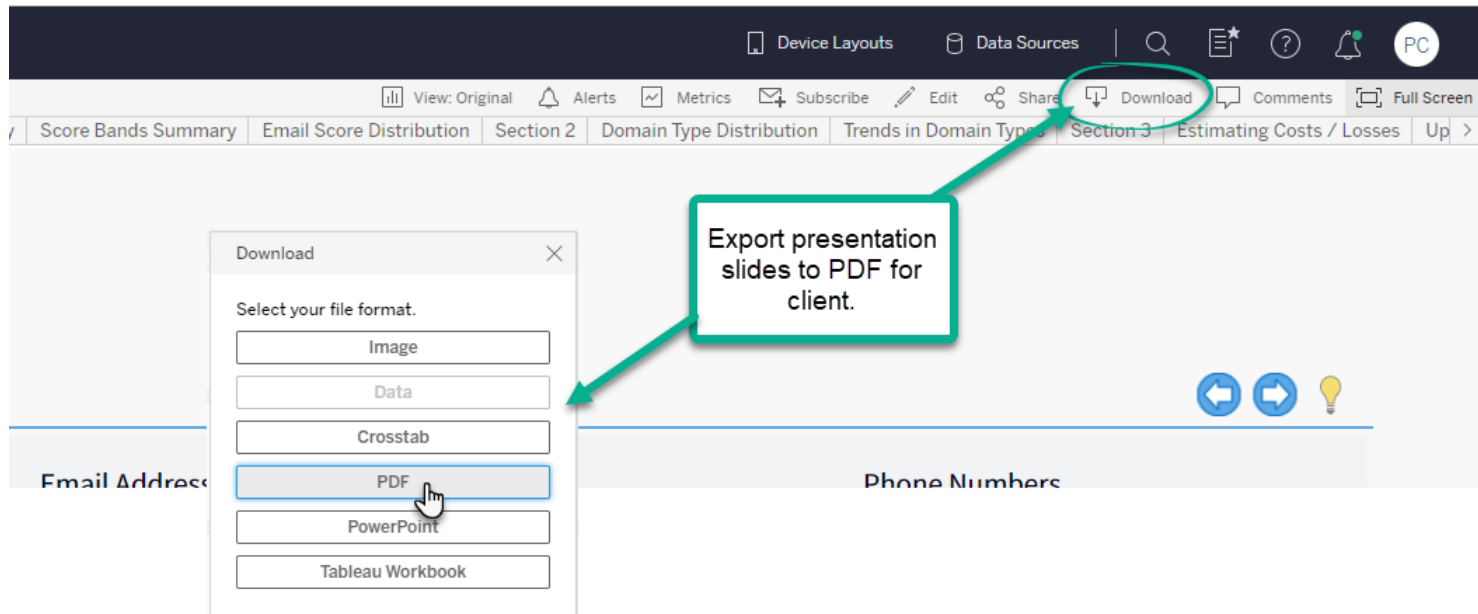

- **Present Tableau workbook in Full-Screen Mode**
 - Professional Look
 - Maximizes screen real-estate
 - Hides the secret sauce

Presentation Tips

Making the Most of Your Workbook

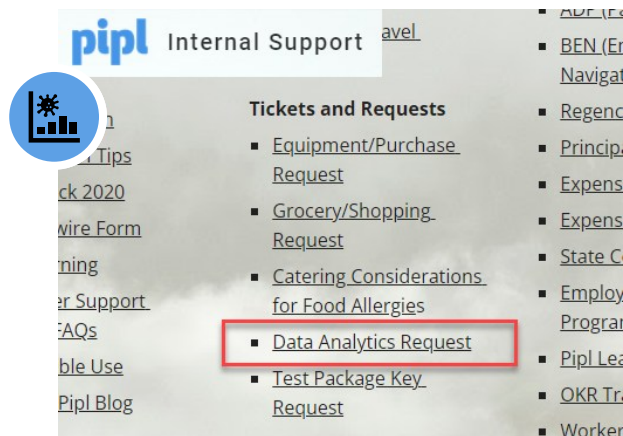

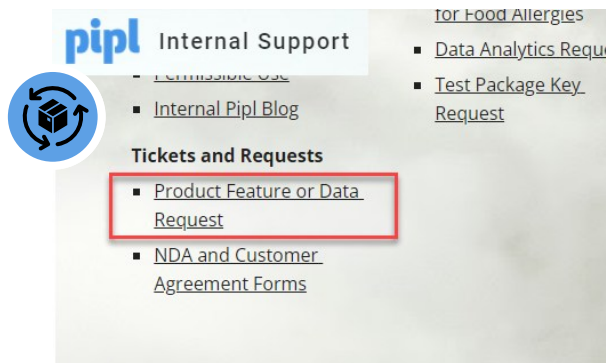

- Use PDF Export to download & share presentation
 - Accept defaults
 - Ensure Letter and Landscape

Presentation Tips

Making the Most of Your Workbook

- **Review workbook well in advance of client call**
 - Examine questionable data → contact Product via [Data Request Ticket](#)
 - Identify unruly charts → contact Phoenix via [Analytics Request Ticket](#)
 - Analytics & Product may not be available at last minute to address your questions
 - Ensure input costs match your answers in client questionnaire

Presentation Tips

Making the Most of Your Workbook

- **Uncover the bias in their test data. Did they send us...**
 - A Random Set of transactions?
 - Recently Seen transactions?
 - Only those sent to a particular service provider?
 - Only Automated Decisions?
 - etc.
- **Ask Questions. Ask Questions! ASK QUESTIONS!**
 - Find out how they plan to use our data in their customer journey
 - Find out if we are in a bake-off
 - Determine if we are displacing or fully replacing any existing solutions
 - Find out if our trust signals will be used to corroborate the output from a different vendor
 - Layered risk mitigation is standard practice.
 - Hybrid risk mitigation is relatively new strategy so expect companies to intentionally double-up on the collected data from vendors to improve machine learning models.

Q&A
